

Easily Manage Your Data

Yejj has recently completed a comprehensive, web-based, clinical database for a client (NGO) here.

This exciting tool has enabled them to better manage their client base across Cambodia at clinics in Phnom Penh and across the country. All previous paper based questionnaires, evaluation forms, client notes, & contact details are now all stored in a single online database. This allows for quick and easy access to the data from any computer or phone from any of their offices.

This simple tool can be used for keeping records and data for a range of different organizations that have clients / street kids / at risk individuals who are monitored over a period of time.

If you have paper, spreadsheet based forms or questionnaires, we can easily turn this into useful & useable data that your team can access securely wherever they are in the world. Your stakeholders and donors can also easily access reports that you wish to show them in real time from their own offices.

If you would like to know how this could help your organisation, or for more information, please contact us at; web@yejj.com or on +855-92-566060.
